EXCEL TOOLKIT / CUSTOMER EDITION

Price cleaning jobs with more consistent math.

QUICK START GUIDE • VERSION 1.0

> **Important:** All sample wages, supply costs, hours and quote prices are fictional teaching values. Enter your own actual costs and confirm your sales-tax rules before making a customer quote. The workbook does not guarantee profit.

Start in six simple steps

1 OPEN THE BLANK WORKBOOK Open **Cleaning_Pricing_Calculator.xlsx** in desktop Microsoft Excel. Save a working copy. The example workbook is only a demonstration.

2 CONFIGURE SETTINGS Replace blue values with your loaded labor cost, mileage, overhead, contingency, target margin, estimated payment fees, minimum price, rounding step and applicable sales tax.

3 ADJUST SERVICES Update default **hours per employee** and per-job supply costs. These are example service names; change supported entries in place.

4 ENTER ONE JOB In **QUICK QUOTE**, select a service and enter crew size, paid hours, mileage, extra costs and discount. Check that status reads **READY TO REVIEW**.

5 REVIEW THE CUSTOMER DRAFT Open **CLIENT QUOTE**, which hides your cost breakdown. Verify the scope, tax, customer details and legal terms before sharing.

6 PLAN AND IMPROVE Use **JOB SCENARIOS** to compare up to 25 estimates, then manually record real completed-job costs in **JOB LOG**.

Blue cells are editable inputs. **Dark text** shows calculated values. **Teal totals** emphasize the quote. Orange review messages need attention.

What each tab does

TAB	USE IT FOR
READ ME	How to start, review and understand color conventions.
OVERVIEW	Snapshot of planned quotes and manually-entered actual jobs.
QUICK QUOTE	Build one cost-based service estimate; see internal margin.
CLIENT QUOTE	Draft amount to communicate to customers; no internal costs shown.
JOB SCENARIOS	Compare up to 25 possible jobs using the same assumptions.
JOB LOG	Record actual money received and expenses after a job.
SERVICES	Edit service hours per employee and supplies.
SETTINGS	Your operating cost and quoting assumptions.

Critical setup details

Loaded hourly labor cost Enter the actual cost of a worker-hour including employer burden; do not confuse employee cost with the rate charged to customers.

Hours per employee For two workers, each on site 3 hours, the workbook counts **six** paid labor hours. Paid travel time per employee is additional.

Overhead and driving Overhead is per job; mileage is round-trip kilometers times your entered vehicle allowance. Fuel and insurance should not be double counted if already included.

Taxes The default 0% tax is an **unconfigured placeholder**. Verify any tax collection duties and rates for your jurisdiction before issuing real quotes.

Fee assumption The processing rate is a rough percentage; real payment processors may charge fixed, cross-border or conversion fees as well.

The pricing method

Designed to make the math visible and reproducible.

1	**Total paid labor**	**Crew × (hours per person onsite + paid travel) × loaded hourly cost**
2	Operating cost before buffer	Labor + supplies + vehicle allowance + overhead
3	Modeled job cost	Operating cost + rounded contingency allowance
4	Price for your margin	Cost ÷ (1 – target margin – estimated payment fee rate)
5	Pre-tax customer amount	Round list price upward; subtract any entered discount.
6	Customer total	Pre-tax amount + estimated applicable sales tax.
7	Contribution	Pre-tax amount – modeled job cost – estimated payment fee.

FICTIONAL worked example

MODEL INPUT / STEP	ILLUSTRATIVE CAD
2 staff × (3 onsite + 0.25 travel) × $25/h	$162.50 labor
Base + extra supplies	$13.00
12 km × $0.55	$6.60
Job overhead	$14.00
Operating subtotal	$196.10
8% contingency	$15.69
Modeled cost	$211.79
List price rounded up	$330.00
Discount	–$10.00
Customer amount BEFORE tax	$320.00
3% processing-fee estimate	$9.60
Estimated contribution	$98.61

The contribution margin for this fictional example is 30.8%. It is not accounting net profit, a typical cleaning price or a forecast of earnings.

Quote workflow & review checks

Before you share a quote

• Confirm cleaning tasks, property access, expected condition, excluded work and cancellation or change terms with the customer.

• Set your own wage, insurance, travel and overhead assumptions. Check whether extra labor, disposal or specialty products change the scope.

• Verify your tax status and applicable tax rate. The workbook does not research tax law or determine if you must register.

• Check QUICK QUOTE status = READY TO REVIEW; review amounts, customer name, date and draft terms on CLIENT QUOTE.

• Export the approved CLIENT QUOTE as PDF using your spreadsheet application if you need a printable file. Never treat the tab as a completed legal contract.

If you see a warning

MESSAGE	RESPONSE
SELECT SERVICE	Choose a service in the input dropdown.
INVALID / CHECK SERVICE	Use an exact service name listed on SERVICES.
CHECK INPUTS	Review crew, times, negative values, margin+fee and rounding.
REVIEW SETTINGS	Check costs and tax; set SETTINGS review flag to READY only after verification.

Privacy: Use buyer-authorized data only. Do not put bank credentials, government ID numbers, residential addresses or unnecessary private customer records into quote examples, screenshots or public files.

Important limitations & license

Business judgment remains essential

This downloadable workbook is an offline tool for internal administrative calculations. It does not take payments, invoice customers, access bank records, calculate your actual taxes or guarantee an operating margin. Demand for the product and successful quote acceptance must be tested.

Changes in wages, travel, supplies, bad debt, discounts, refunds, paid marketing, accounting costs and unexpected work can materially change real outcomes. Do not assume the fictional defaults are market rates.

What the purchase license allows

A purchaser can use and modify the workbook for internal operations in one business, keep private backups and export their own customer quotes. Redistribution, resale, and hosting a downloadable copy of the template for others are not granted. Full terms are in LICENSE_AND_DISCLAIMER.txt.

Compatibility & files

The customer package includes a blank .xlsx template, a separately named FICTIONAL DEMO workbook, this guide, a start note and the license. Neither workbook contains macros, external links or scripts that upload your information. It is authored for recent Microsoft Excel; other spreadsheet applications may differ.

Support and next steps

Use the legitimate seller contact supplied in the order confirmation for product defects. Keep your original download unchanged, and make a separate working copy. Seller support promises and refund rights depend on the final storefront terms and applicable law; this guide does not override them.

VERSION 1.0 | NO COMPANY OR REAL CUSTOMER RESULTS ARE REPRESENTED IN THE FICTIONAL EXAMPLES.
