Inventory Reorder Planner - Private Integration Tes

Calculate a reorder threshold and the gap to that threshold; this is not an economic-order-quantity model.

EDIT BLUE INPUT CELLS

Daily unit demand	12.00
Lead time in days	7.00
Safety stock units	30.00
Units available	80.00

Reorder point	**114.00**
Suggested reorder units	**34.00**

Inputs are illustrative, not market research. Change them for your business.

Inventory Reorder Planner - Private Integration Test

Calculate a reorder threshold and the gap to that threshold; this is not an economic-order-quantity model.

1. Save a working copy.

2. Edit blue cells on Calculator; amounts must use one consistent currency and period.

3. Read the calculated green outputs. Compare scenarios in copies of the workbook.

4. Blank numeric inputs are treated as zero by Excel. Negative inputs are unsupported.

5. Zero contribution cannot break even. A 100% margin cannot produce a finite quote.

No macros, external links, hidden sheets or customer data are included.

Illustrative planning tool; not tax, legal, investment or accounting advice.
