Inventory Reorder Planner

Review one item: reorder threshold and gap to threshold. Not an optimized order quantity.

EDIT BLUE INPUT CELLS

Daily unit demand	12.00
Lead time in days	7.00
Safety stock units	30.00
Units available	80.00

Reorder point	**114.00**
Gap to reorder threshold	**34.00**

Illustrative inputs. Enter all four nonnegative numbers; review supplier and whole-unit constraints.

Inventory Reorder Planner

Single-item reorder threshold and gap. This is not an order-management or forecasting system.

1. Save a working copy.

2. Enter demand per day, lead time in days, and stock in units.

3. Read the calculated green outputs. Compare scenarios in copies of the workbook.

4. Enter all four nonnegative numbers. CHECK INPUTS means missing, text or negative input.

5. Fractional inputs are allowed. Review pack sizes, minimum orders and stock on order yourself.

No macros, external links, hidden sheets or customer data are included.

Planning aid only. Confirm your assumptions and supplier constraints before ordering.
